

JOST

JOST Brake Pads

Blue – guaranteed JOST quality
for all applications

JOST quality for all applications

The new JOST pads come in innovative **blue**. This guarantees JOST quality at the first sight.

Brake pads are exposed to the most adverse weather and road conditions. This all has a challenging and massive impact on the performance of brake pads. Extensive field test become inevitable. More than 1.500.000 km of road testing with all kinds of commercial vehicles, from long distance transport to construction vehicles, show the better efficiency of JOST pads: higher longevity and an optimised wear behaviour of both pad and disc.

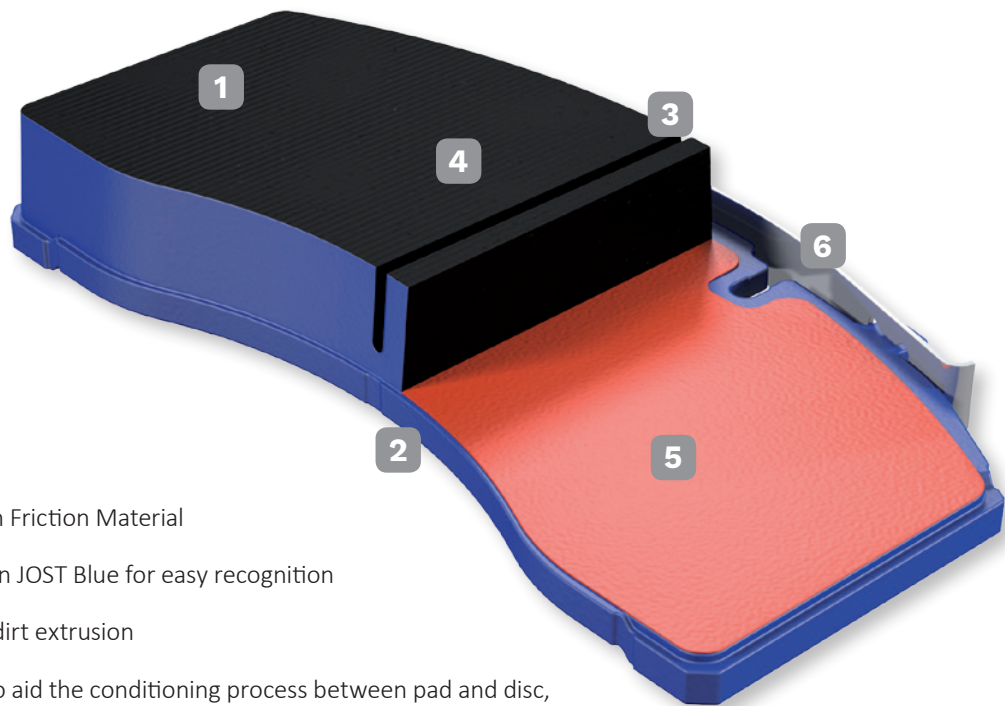

Advantages at a glance

- Safe braking of heavy weight commercial vehicles due to a high friction coefficient stability. For all truck and trailer applications.
- Long service life and highest efficiency due to optimal wear behaviour
- Reliable performance from the first braking until wear limit, even in extreme operating conditions.
- Improved service life of the brake disc due to high-class friction material
- ECE R90 Homologation

Reliable technology

Brake pads consist of a back plate and the friction material. A unique friction material guarantees optimal performance.

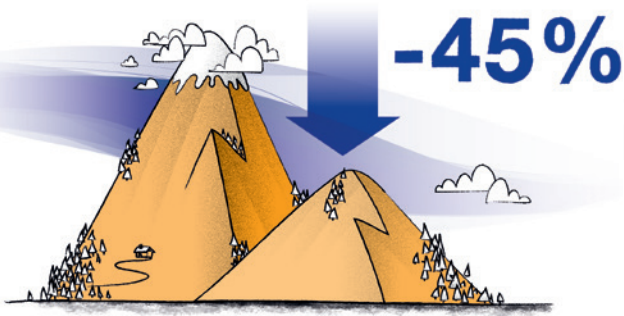

- 1 Unique Premium Friction Material
- 2 Steel Backplate in JOST Blue for easy recognition
- 3 Slot for reliable dirt extrusion
- 4 Green Coating to aid the conditioning process between pad and disc, even with used discs
- 5 Underlay for a safe connection between friction material and backplate
- 6 Retaining bracket for a stable position in the brake carrier

Convincing advantages

Blue Power Less fading

Heavyweight truck and trailers are brought to a stop reliably, even in challenging transport missions on demanding topographical mountain terrain. With the JOST friction material the brake systems is brought to its optimal brake performance and lowest braking distance. The comparative test according to ISO 26865 with top of the market pads show that the blue JOST brake pads perform significantly better also in severe use cases.

Blue Quality

Tested and approved according to highest standards

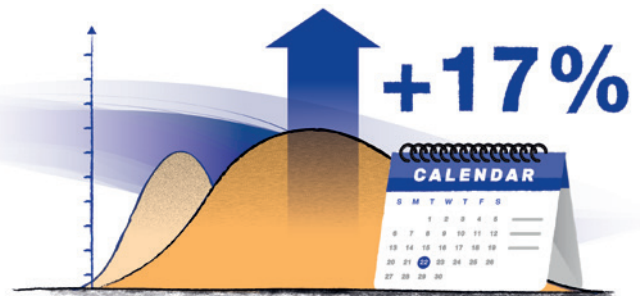

All functionalities and characteristics are ISO – and JOST laboratory tested. Additionally a europewide field test with vehicles in different transport missions has been carried out. Seven million successful test kilometers give the best proof for the reliability of the blue brake pads.

Blue Nature

Lowest possible environmental impact

Optimal abrasion of the friction material also means lowest possible brake dust impact on our environment.

Blue Lifetime

Higher lifetime

JOST – as always a promise for highest possible product life-time.

Blue Savings Savings

Increased lifetime of the blue pads which leads to decreased downtime required in workshops and improves vehicles availability and this can impact the economic success of each fleet.
